

ASAG easy and thread beading.
By SCHELL.

Easy to fit. Reliably leak-proof. The choice is clear: Made in Germany. SCHELL angle valves and appliance connection fittings.

Self-sealing thread with ASAG easy or thread with factory-applied beading makes installation easier.

Self-sealing ASAG easy:

Quick and reliable installation without sealants

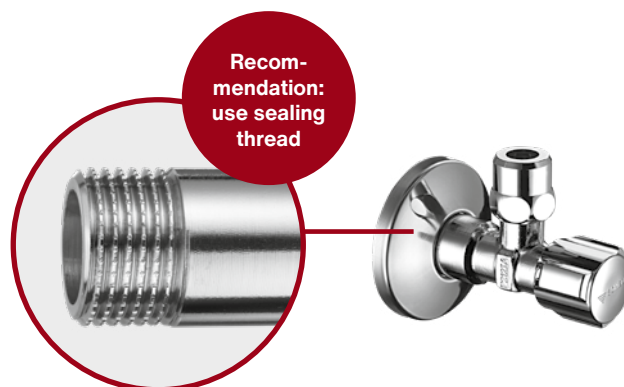

ASAG easy, the self-sealing connection thread from SCHELL, makes the installation of angle valves and appliance connection fittings even more convenient while offering optimum seal quality.

- Fastest and most hygienic installation
- Sealant-free installation
- Subsequent valve adjustment in vertical position possible
- Simple replacement of fitting once inserted

Please note: Do not use additional sealants for installation – this risks causing damage from stress corrosion cracking. The ASAG easy ring must be inserted 3 mm into the mating thread.

Factory-applied beading:

Simple installation with conventional sealants

SCHELL's factory-applied beading makes angle valves and appliance connection fittings easier to install with conventional sealants and without time-consuming roughening.

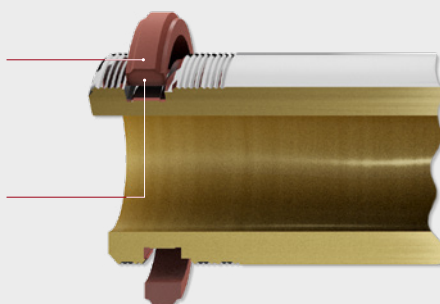

- Conventional installation with sealants (sealing cord, sealing tape or hemp), no roughening necessary
- Simplified installation thanks to optimum level of roughening
- Guarantees a professional threaded connection

Please note: Use sealants sparingly during installation to ensure an optimum seal and avoid stress corrosion cracking due to excessive use of sealants.

How ASAG easy works:

Special contour on sealing ring for easy insertion

Groove with beading to improve sealing ring grip during insertion
