

The original »Made in Germany«.

**500.000.000** angle valves.

**200** product versions.

**65** years of experience.

Angle valves and appliance connection fittings  
from Europe's market- and quality leader: SCHELL.

 **SCHELL**

# 5 Good reasons for brand quality from Europe's No. 1

There are many reasons which speak for SCHELL's brand quality. The most impressive reason: more than 500 million installed angle valves and appliance connection fittings are the best proof that craftsmen, designers and architects have been relying on Europe's No. 1 and on quality »Made in Germany« for generations.

**Convince yourself.**

SCHELL only uses materials suitable for drinking water.

## Maximum drinking water hygiene.

Our name stands for “health responsibility”. Therefore, meeting the highest hygiene standards for drinking and process water is a matter of course for us. For example, when manufacturing our products we only use materials suitable for drinking water. Nickel and lead contamination in drinking water due to inferior brass alloys? Not a trace with SCHELL. And by means of our solutions, such as our sampling angle valves for checking drinking water or our innovative HyTwin system, we provide everything which you can expect from a manufacturer of high-quality hygiene systems.

Patented: the self-sealing connection thread ASAG easy.

Prevents the sealant from slipping: the pre-assembled beading.

## Simple installation, operation and maintenance.

Uncompromising quality pays off, especially regarding assembly and operation. Smart features, such as the pre-assembled thread beading, the self-sealing connection thread ASAG easy, the double O-ring seal, the grease chamber or the cone compression connection with length compensation, enable an especially quick and safe assembly – as well as extra easy operation even after years of use. All these factors make our angle valves and appliance connection fittings practically maintenance-free.

Can be carried out without using tools or switching off the central water supply: the cleaning or the replacing of the angle valve filter.

Guarantees the brass spindle's easy movement for decades: the grease chamber.

## Sustainability & long service life.

Our angle valves and appliance connection fittings are also exemplary regarding their sustainability and long service life. Not only do they save up to 40% water due to innovative design solutions, but they also guarantee a fine adjustment of cold and warm water. This means that no warm water is wasted and, as a result, there are also no unnecessary CO<sub>2</sub> emissions, which damage the environment. Once installed, SCHELL products have always boasted a long service life, thanks to selected and high-quality materials. For generations.

Choose the Original  
Choose Success!

## Appealing design.

The right quality, the right technology, the right choice. And the design? That is right, too! Because our products are also visually appealing. How do you benefit? From the assurance that SCHELL can provide the right design solution for every interior and every taste.

## A wide product range which is unrivalled.

When it comes to angle valves and appliance connection fittings, SCHELL, with its more than 200 product versions, can offer you a product range which has an unrivalled extent. Solutions with filter function or backflow preventers, flow restrictors or sampling valves, whether lockable or with an inclined seat, and many more – SCHELL can always provide you with a product which meets your individual requirements and wishes.

## A convincing number.

More than 500 million installed SCHELL angle valves and appliance connection fittings »Made in Germany« – this is the situation 65 years after installing the first SCHELL angle valve. Since then many more SCHELL solutions have been added.

The question remains however: When will your installation be one of the more than 500 million?
